You will find inclosed a sketch showing the location of your school and the surrounding roads. I wish to have you help me prepare a map to show the location of all children who will attend the new Carver school. Please locate on this map all of the children who are in your school and send to me a list of the names of these children, not on, but attached to this sketch. Indicate one child by a small circle at the approximate location of their homes, thus . If there are several children in the same house or two houses adjoining each other, place the number of children on the inside of the circle, thus . In case of a group of children in a village, you might simply put inside of the circle which I have used to indicate the village, the number of children in it.

I wish to have on this map also, the high school children who are in your elementary school area and who are now attending high school at Douglass . Indicate these children by placing a small square at the location of the home. Several may be indicated by putting a number on the inside of the square. If you have elementary children who would probably belong in another school area attending your school, indicate their approximate location on your map. I feel sure the older pupils in your school can tell you about the pupils in high school fairly accurately.

I wish to have this sketch sent to me within the next few days as I need it to determine the routes of the school busses that will pick-up children to take to the Carver school.

Very sincerely yours,

O. L. Emerick
Division Superintendent
